SUMMARY

Software Engineer with 2+ years of experience in Python/Odoo backend development, REST APIs for mobile apps, websites, payment integrations, and end-to-end Odoo deployment on AWS EC2. Published six Odoo App Store modules. Backend projects use FastAPI, Redis, Celery, Docker, and CI/CD.

WORK EXPERIENCE

Software Engineer | Webkul Software Pvt. Ltd. *Aug 2024 – Present*

- **API Development:** Developed and maintained REST APIs for mobile and web clients across the Mobikul, Mobikul POS, Mobikul Multivendor, Mobikul Attendance, and Delivery Boy apps (products, orders, delivery, inventory, notifications); delivered multiple client projects with customizations such as notification sounds, search, and a customer-based pricelist.
- **Odoo App Store:** Built and published six Odoo modules in Python (models, APIs, web views): Project Gantt Native (68+ sales), Mobikul (54+ sales), Delivery Boy (37+ sales), AI Business Card Reader (12+ sales), ZPL Label Designer (7+ sales), and Manufacturing Alternate Product (7+ sales).
- **AI & OCR:** Developing Odoo AI OCR Mobile App, an AI-powered OCR module that scans invoices, vendor bills, expenses, and business documents using Generative AI.
- **Websites & SEO:** Created a real estate auction website with WebSocket-based real-time bidding, plus additional website modules and SEO redirects to optimize a client's website. Currently building client websites and integrating the Mobikul and Delivery Boy APIs into mobile apps.
- **E-Commerce & Migration:** Worked on Odoo ERP e-commerce and sales projects, including migrating CS-Cart websites for multiple clients to Odoo as the end-to-end developer; migrated a client's Mobikul server and its data from Odoo 16 to 19.
- **Payments:** Integrated Stripe Terminal, Linkly, and Tyro payment services with Odoo Invoicing (API communication, transaction and error handling, payment-status synchronization), plus payment providers including Stripe and Worldpay.
- **Manufacturing:** Built Manufacturing Gantt Native, the Manufacturing Alternate Product module (alternate products on manufacturing orders), other manufacturing modules, and a customizable ZPL label designer with dynamic product data, barcode/QR generation, label previews, and printer-ready ZPL output.
- **Deployment:** Deployed Odoo end to end on clients' AWS EC2 instances, including Odoo configuration, Nginx configuration (sites-available and sites-enabled), and service files; optimized the servers for Odoo.
- **Integrations & Authentication:** Implemented OTP authentication for login and signup, plus Nafath and OTP/WhatsApp verification, adapting backend validation to client-specific requirements; delivered API customizations for a separate client mobile app using Odoo's JSON-2 API.
- **Production Support:** Resolved production issues across multiple client instances and Odoo versions, including API validation, database concurrency, authentication, third-party integrations, and Odoo.sh deployment/build failures.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++
Backend & APIs: Odoo (Python), FastAPI, Django, REST APIs, OpenAPI, JWT/OTP Authentication, Role-Based Authorization
AI: Generative AI, AI-powered OCR
Data & Async Processing: PostgreSQL, Redis, Caching, Celery, Message Queues, Background Processing, Rate Limiting
DevOps & Cloud: AWS EC2, Nginx, Linux, Odoo Deployment, Odoo.sh, Docker, Docker Compose, GitHub Actions (CI/CD)
Testing, Tools & Frontend: Pytest, Git, GitHub, Postman; React.js, Next.js, Owl.js

PROJECTS

E-Commerce Order Management Platform | *Python, FastAPI, PostgreSQL, Redis, Celery, Docker, AWS* GitHub

- Designed REST APIs for authentication, products, inventory, cart, and orders, with JWT authentication and role-based authorization; added Redis caching, API rate limiting, and asynchronous order processing with Celery.
- Modeled an indexed PostgreSQL schema with transaction handling; containerized services with Docker Compose; added Pytest unit and integration tests and a GitHub Actions CI/CD pipeline.

Distributed Notification Platform | *Python, FastAPI, Redis, Celery, PostgreSQL, Docker* GitHub

- Built an asynchronous notification-processing architecture with retry and failure handling for workers, and idempotent processing to prevent duplicate notifications.
- Added scheduled notifications, user notification preferences, rate limiting, and Redis-backed queues; documented the API with OpenAPI.

EDUCATION

B.Tech, Computer Science and Engineering – Bhagalpur College of Engineering | CGPA: 7.82 2019 – 2023
12th (PCM) – Langat Singh College, Muzaffarpur | 65.6% 2016 – 2018
10th – N. K. High School | 76.2% 2015 – 2016
